

RM-10352 is a timely proposal that will result in better utilization of the 160 meter amateur band. All other band allocations in the medium and high frequency range are appropriately divided by mode of transmission, thus reducing co-interference between narrow and wide modes. The cooperative agreement between users of this band need to have the rule of radio law updated to provide enforceable rules for all to follow. As FCC licensee, K4CIA, since 1955 and frequent user of the 160 meter band, I fully support and urge the Commission to adopt this proposal. WGM
